

## High Temperature Through Hole Inductors

Model HM53E-2211

### Features and Benefits

- Operating Temperature Range -40°C to +220°C
- Temperature Rise, Maximum 50°C
- Operating Frequency Up to 200KHz
- RoHS Compliant

### Specification @ 25°C

Notes:

(1) Inductance is measured at 10 kHz, 0.1Vac without DC current.

(2) The Heating Current is the approximate DC current which causes the component temperature to increase by 40°C. This current is determined by soldering the component on a typical application PCB, and then applying the current to the device for 30 minutes.

(3) The rated current (I<sub>rated</sub>) is the approximate current at which the inductance will be decreased by 30% typical from its initial (zero DC) value.

(4) The part temperature (ambient + temperature rise) should not exceed 220°C.
