## Photologic ${ }^{\circledR}$ Slotted Optical Switch

## OPB917 Series

## TT Electronics

## Features:

- Low power consumption
- Data rates to 250 kBaud
- Choice of two logic states and two electrical outputs
- $24^{\prime \prime}$ ( 610 mm ) minimum 26 AWG UL listed wires
- Slot width $0.20^{\prime \prime}(5.08 \mathrm{~mm})$
- Slot Depth 0.86" (21.84 mm)

## Description:

The OPB917 series of Photologic ${ }^{\circledR}$ photo integrated circuit switches provide optimum flexibility. Each switch consists of an infrared Light Emitting Diode (LED) and a Photologic ${ }^{\circledR}$ photo integrated circuit, mounted in an opaque housing with clear windows for dust protection. The deep slot allows for a longer reach of the optical path from the $0.650^{\prime \prime}$ ( 16.5 mm ) mounting plane. Internal apertures are 0.010 " x 060 " (. $25 \mathrm{~mm} \times 1.52 \mathrm{~mm}$ ) for the Photologic's " S " side and 0.05 " x 0.06 " ( $1.27 \mathrm{~mm} \times 1.52 \mathrm{~mm}$ ) for the LED "E" side.

Devices in this series exhibit stable performance over supply voltages ranging from 4.5 V to 16.0 V , and may be specified as buffered or inverted with an internal $10 \mathrm{k} \Omega$ pull-up resistor or open collector output. Devices are TTL/LSTTL compatible and can drive up to 10 TTL loads.

Custom electrical, wire or cabling are available. Contact your local representative or OPTEK for more information.

## Applications:

- Mechanical switch replacement
- Speed indication (tachometer)
- Mechanical limit indication
- Edge sensing

Electronics

Absolute Maximum Ratings ( $\mathrm{T}_{\mathrm{A}}=25^{\circ} \mathrm{C}$ unless otherwise noted)

| Storage \& Operating Temperature Range | $-40^{\circ} \mathrm{C}$ to $+80^{\circ} \mathrm{C}$ |
| :---: | :---: |
| Lead Soldering Temperature [1/16 inch (1.6mm) from the case for 5 sec . with soldering iron] ${ }^{(1)}$ | $260^{\circ} \mathrm{C}$ |
| Input Infrared LED |  |
| Supply Voltage, $\mathrm{V}_{\text {cc }}$ (not to exceed 3 seconds) | 18 V |
| Input Diode Power Dissipation ${ }^{(2)}$ | 100 mW |
| Forward DC Current | 50 mA |
| Output Photologic ${ }^{\text {® }}$ |  |
| Voltage at Output Lead (Open Collector Output) | 35 V |
| Diode Reverse DC Voltage | 2 V |
| Output Photologic® ${ }^{\text {® }}$ Power Dissipation ${ }^{(3)}$ | 90 mW |

Notes:
(1) RMA flux is recommended. Duration can be extended to 10 seconds maximum when flow soldering.
(2) Derate linearly $1.33 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ above $25^{\circ}$.
(3) Derate linearly $2.50 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ above $25^{\circ}$.
(4) Normal application would be with light source blocked, simulated by $\mathrm{I}_{\mathrm{F}}=0 \mathrm{~mA}$.
(5) All parameters tested using pulse technique.

## Electrical Specifications
