Construction

A thin-film material is selectively deposited on an aluminium nitride substrate together with metallic contacts at each end of the resistor. The unadjusted resistors are heat treated to give the required TCR and stability, then a precisely controlled laser trim process adjusts the resistance value. Epoxy protection is applied, and wrap-around terminations are added and tin (Sn) plated. Each resistor is measured immediately before packing into tape.

Marking

TFHP resistors are marked white on black with 3 or 4 characters indicating ohmic value.

Mounting

The above chip surface temperature readings were made by thermal camera under room temperature conditions with the component mounted at the centre of a 40 x 90mm test board with double sided 70 μm (2oz) copper connected with thermal vias.

Packaging

TFHP resistors are packed in tape which is paper for 1206 and plastic for 2512, on 178mm reels. For full details of tape and reel dimensions see <https://www.ttelectronics.com/ttelectronics/media/productfiles/applicationnotes/ps001-packing-of-general-purpose-chip-resistors.pdf>
