

# HMI Flexible Light Strip

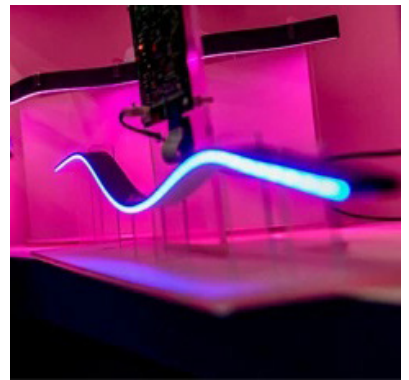

## ENHANCING THE PASSENGER EXPERIENCE IN AIRCRAFT INTERIORS

Flexible LED lighting strips by TT Electronics provide a power efficient, robust and certifiable solution in white or RGB multi-coloured options that bend around a 75mm radius.

The perfect blend of form and function for aircraft interior mood lighting and signage solutions.

### Key Features:

- Single colour or RGB-W
- Complex curves achieved by tooling arc shaped strips
- Weight and power saving
- Reduced maintenance
- Minimum bend radius 50mm
- Tested for fire (smoke density and toxicity), temperature and ESD immunity
- Interface RS485 – CanBus

### Solutions

Our solutions are driven by light-guide technology which supports the requirement for integration with various surfaces including curved, while high-brightness LEDs provide compact and efficient illumination, helping to reduce overall panel size. We are a trusted partner in the aircraft interiors sector. Our HMI designs and certified products are currently flying with the world's major airlines in all cabins, including business and first class.
