Low Resistance Metal Alloy Power Resistors

LRMAP3920

Features:

- Resistance range 0.2mΩ to 5mΩ
- Excellent long-term stability
- Standard power rating up to 5W
- Thermal substrate power rating up to 10W
- Current sensing for power electronics
- AEC-Q200 qualified

All parts are Pb-free and comply with EU Directive 2011/65/EU amended by (EU) 2015/863 (RoHS3)

Marking

The component is laser marked with "3920", alloy type, ohmic value (using R to indicate decimal position in ohms) and tolerance.

Solvent Resistance

The component is resistant to all normal industrial cleaning solvents suitable for printed circuits.

Construction

The component is formed from a continuous band of E-beam welded precision resistive strip. Various alloys are used based on the resistance value.

Thermal Data & Mounting

Note 1: FR4 board details: 102x51mm, high T_g FR4 board with 70 μ m (2 ounce) inner and outer Cu planes or similar substrate, such that terminal temperature is maintained at \leq 120°C.

Note 2: Thermal substrate details: DBC or similar thermal substrate, such that terminal temperature is maintained at <70°C.

Pulse and Overload Performance

Measurement

Resistance testing for the LRMAP3920 is performed on the underside of the copper contacts using the following method.

Processing

LRMAP3920 series resistors are suitable for IR reflow soldering. The recommended reflow profile for Pb-free soldering, for example using SAC387 alloy (Sn95.5%, Ag 3.8%, Cu 0.7%), is as follows:

Pre-heat: 30s to 45s at 180°C Soldering: 20s to 40s at 250°C Peak: 260°C
